KAISAI

User-friendly air conditioning

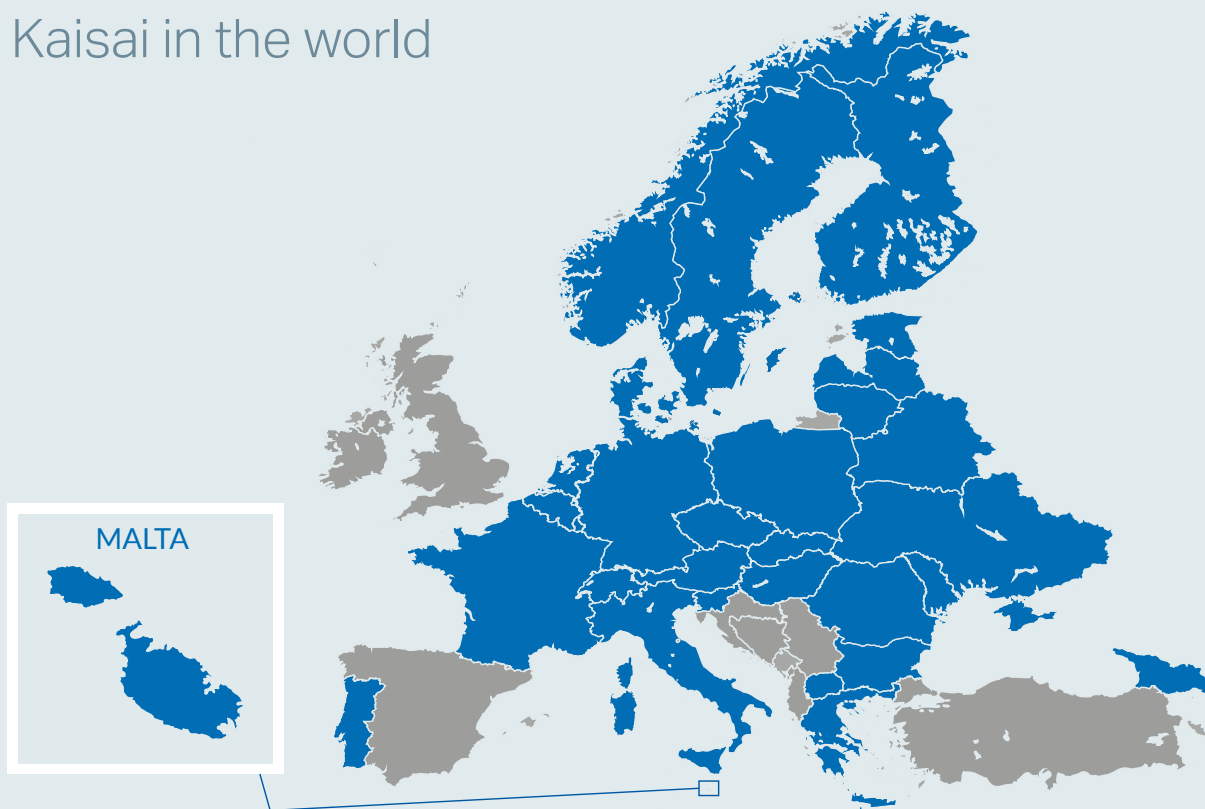

Kaisai units are **high quality, environmental-friendly products**, designed with the operation comfort in mind. Moreover, we offer them at reasonable prices.

The Kaisai brand debuted on the Polish market in 2011 and since then, year after year, it has been recording growing sales figures in Poland as well as on foreign markets. The latest technological solutions make Kaisai devices leaders in their class and meet high expectations in terms of ecology, safety, energy efficiency, quiet opera-

tion, comfort of use and manufacturer's warranty. Through many years of investment in technology, the Kaisai units have been recognized as some of the most innovative air-conditioning solutions, successfully implemented in public facilities and residential buildings.

Kaisai in the world

Within the business platform of Kaisai International Corporation, following the principle of *Think globally - work locally*, the Kaisai brand is present in the following countries:

Austria, Belarus, Belgium, Bulgaria, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Georgia, Iceland, Italy, Latvia, Lithuania, Luxembourg, North Macedonia, Malta, Moldova, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Ukraine.

WE CARE ABOUT AIR

The motto "We Care about Air" derives from passion and understanding of human needs and is a declaration of responsibility for people and the environment. Our focus is on the quality and comfort of air – in the office, at home and in all rooms where people are present. Our values: respect for the environment, partnership with the Client, responsibility for the Employee, taking care of the business environment.

Kaisai participates in the programs of Klima-Therm Group Academy

The basic scope of the Academy's activities includes:

Product-related and technical trainings

Authorization trainings – KEH heat pumps

Sales trainings

Testing Kaisai products

The Academy of the Klima-Therm Group is an innovative educational and research project, which main objective is to constantly boost the knowledge of the industry environment regarding current trends in the field of air conditioning and ventilation as well as the latest technological, design-related and product solutions. Thanks to the Academy's activity, customers can be sure of the professional knowledge of installers: it is a guarantee of safety and trouble-free operation of our equipment.

Kaisai is committed to ensure the highest quality of its products and installations. The Kaisai Authorized Service Partners, as members of the Klima-Therm Group, benefit from the training opportunities offered by the Academy. Trained installers not only receive theoretical knowledge, but can also acquire practical skills under the supervision of qualified trainers. The Academy has 3 training centers serving customers from all over Poland: in Gdansk, Warsaw and Katowice.

Kaisai products meet stringent safety, health and environmental requirements and have been awarded several labels and certifications. The refrigerants used are certified by the National Institute of Public Health.

The most interesting features of Kaisai units

More information about air conditioning, heating and ventilation can be found in the guide at our website:

kaisai.com

The guide prepared by us will introduce you to the world of air conditioning and will enable selection of units meeting the specific user's needs. Please contact our consultants who will quickly and reliably answer your questions about Kaisai products.

Selection of air conditioning system

Air conditioning **in house application**

From March to September, the days are longer and the temperatures are higher. Especially in the period from June to August there are periods of several weeks of heat, which can cause discomfort while staying indoors. We recommend to consider it in advance, ensuring the ideal, comfortable air temperature regardless of the season and day.

Air conditioning was previously associated mainly with office premises and public buildings. Currently, it is within the financial reach of individual users. In addition, thanks to the heating function available in state-of-the-art units, air conditioners can also serve as an additional source of heat in colder periods. Air conditioning is an efficient and economical alternative to fans and electric heaters - it consumes up to 4 times less electricity.

Operating costs

Domestic air conditioning is fundamentally different in terms of power consumption from more demanding industrial air conditioning. A device with a capacity of 2.6 kW consumes less than 1 kW of electricity per hour of operation, which costs about 0.10 EUR.*

There are a number of general recommendations and indicators to help users determine the required power level. The most important parameter is the cubic capacity of the air-conditioned room. It is assumed that a cooling capacity requirement of 40 W/m³, or 120 W per m² of surface area, can be estimated for standard rooms of approximately 3 m in height. This means that even the smallest 2.6 kW air conditioner can be sufficient for a room of 21 m².

*Cost estimated for Warsaw (Poland) 2019.

HINTS **AIR CONDITIONING**

Air conditioning is about ensuring comfort and health

Home air conditioning is the comfort available for everyone. It allows you to freely control the temperature in your home, apartment, office or small retailer – replacing or complementing the central heating system. However, the advantages of an air-conditioning system do not stop there. Implementation of air-conditioning unit turns out to be an excellent way to take care of the health of all users. Modern air conditioners eliminate bacteria and fungi from the air, preventing diseases caused by them, and special filters improve the overall air quality. Air conditioning is also a good solution for maintaining adequate air parameters, when the outdoor air is heavily polluted, e.g. by smog.

Relevance **of energy efficiency class**

The more energy-efficient the device is, the higher its energy class is. When buying an air conditioner, it is worth paying attention to the fact that the energy class of the air conditioner should be at least at the A level. When the air conditioner is in operation, remember to close the windows in the air conditioned room, thus contributing to savings in energy bills. Do not set too low temperature in a room with the remote control, as this may result in increased operating costs.

Selection of air conditioner

Each split air conditioner consists of two components: an outdoor unit and an indoor unit. The first one is installed outside the building, the second one – inside the room.

The principle of the air conditioner operation is based on the physical properties of the refrigerant, which in the case of Kaisai appliances is an ecological refrigerant – R32. Depending on the operating mode of the air conditioner, the refrigerant condenses or evaporates in the indoor unit, releasing heat to or extracting it from the environment accordingly. This way, the air in the room is heated or cooled, and thanks to the system of filters, the air is also purified.

The unit does not blow additional air from the outside, but only cools the air inside. It protects the health of the residents, especially when the air is polluted by the smog.

Heat pump – benefits

Heat pumps, by using the energy stored in the air, are able to heat your house and provide the domestic hot water. Operation of heat pump is made possible by a refrigerant that circulates in a closed circuit and transfers the heat from the environment into the building.

Low operating costs

Heat pumps make a substantial contribution to a significant reduction of the house operating costs. The costs of room heating and domestic hot water (DHW) can be reduced up to four-fold by means of the heat pump. By using the pump, we also reduce the maintenance costs of the system, among other things because there is no need for the chimney inspection.

Resident comfort

Heat pumps are the ideal solution because they provide comfort of operation thanks to the automation features. Convenient indoor temperature and desired domestic water parameters are set up using an intuitive controller. The user does not have to worry about turning on/off the heating system - the unit automatically maintains thermal comfort all year round.

Safe operation

Heat pumps are a very safe solution as they do not pose a fire hazard or a risk of gas escaping or exploding when compared to traditional domestic heating appliances. You do need to worry about gas sensors and you can sleep peacefully.

Green energy source

Heat pumps are one of the ecological sources of energy, because instead of coal, gas or oil they make use of the air potential, using refrigerants that have a much smaller impact on the environment than non-renewable energy sources. The electricity supply also allows the use of home photovoltaics in the so-called "passive house system" (i.e. the system does not consume energy from outside).

An incredible advantage of air-to-water heat pumps is the fact that even 75-80% of the heat going to the heating system is free heat, obtained from the outdoor air. The remaining 20-25% is electric energy needed mainly for compressor and heating system circulation pumps.

Comfort **all year round**

The heat pump transfers the heat from the air to the water, heating up the water. The cold air coming out of the pump can be used to cool rooms, e.g. storerooms or technical facilities.

Reducing CO₂ emissions

Heat pumps are an ideal alternative to gas and coal boilers, helping to reduce CO₂ emissions to the atmosphere. The units operate at the time indicated by the user and do not produce smoke, ash or any other harmful substances.

Air curtains – useful information

Description of operation

Air curtains are mounted above the entrance door. They create a strong stream of cold or warm air directed downwards, which prevents the inflow of air from outside the building and also creates an air barrier against dust, smoke and insects.

Benefits of air curtains

Air curtains are small but functional devices, which allow you to save energy by maintaining a constant temperature and avoiding unpleasant draughts inside a premise.

Their application makes air conditioning more effective and definitely cheaper to use both in cooling mode (does not allow for mixing with air from outside) and heating mode (prevents the flow of heat out of the room).

Air curtains are especially recommended for service premises and retail outlets – they reduce air conditioning bills in summer and heating bills in winter.

Environmental protection

GWP – what is it?

Greenhouse potential (GWP – Global Warming Potential) is a figure expressing the global warming potential of a refrigerant if released into the atmosphere. This is a relative value that compares the effect of 1 kg of refrigerant with the effect of 1 kg CO₂ per 100 years.

ODP – what is it?

Ozone Depletion Potential is an indicator of the harmfulness of chemical substances for the ozone layer. It is a value comparing the influence of a given refrigerant with the analogous mass of R11 refrigerant. The ODP value of R11 refrigerant is defined as 1, the modern refrigerant – R32 – has the potential defined as 0.

R32

Environmentally friendly refrigerant R32, available in the entire Kaisai product range

Kaisai currently applies the latest environmentally friendly refrigerant – R32 – in its products. It is more efficient than refrigerants applied before, so that the air-conditioning system requires less refrigerant volume and has significantly better environmental impact factors. It is a modern solution that takes into account both ecological needs and the economy of application.

Main characteristics of R32 refrigerant

ECOLOGICAL

R32 has the lowest GWP coefficient available on the market, equal to 675, and does not cause damage to the ozone layer, thanks to the ODP coefficient equal to 0. Compared to older solutions, it has as much as 75% less impact on global warming. What is more, it can also be recycled.

ECONOMICAL

Compared to R410A, R32 has a higher energy efficiency, so the air conditioning system requires less energy and the efficiency of the equipment increases by up to 10%.

SAFE

The R32 has low toxicity and low flammability – it does not pose a threat to life and health even in the event of leaks in the installation.

20/20/20 program

Kaisai follows the assumptions of the energy and climate change package, which assumes an increase in the consumption of energy from renewable sources and an increase in energy efficiency by 20% and a reduction in CO₂ emissions by 20% by 2020. Directive 2009/125/EC adopted by the European Union concerns the rules for setting requirements for Energy-related Products (ErP). From 1 January 2013, the provisions of the Directive apply to air conditioners with a cooling capacity of less than 12 kW.

R290

Safe and environmentally friendly
refrigerant available
in portable air conditioners

The refrigerant – R290 – is known as propane, a colorless, odorless organic compound belonging to the group of saturated hydrocarbons existing in natural gas fields.

Devices based on propane have been successfully operating in various countries of the European Union for many years. The propane popularity is steadily increasing due to its low environmental impact while maintaining very good thermodynamic properties. The R290 factor has a zero ODP, which means no negative impact on the ozone layer, and an exceptionally low GWP, which indicates the global warming potential. Propane is a combustible gas and has a flammability limit of 2.1% by volume in the air. This means that with 230g of R290 in Kaisai appliances and special fireproofing, it is also safe for use in confined spaces.

R290 has a low sensitivity to moisture and does not cause corrosion, so it can operate in refrigeration systems equipped with both hermetic and semi-hermetic compressor units.

Energy **efficiency class**

Energy labels shall be affixed to any electrical household appliance sold in the European Union. This is regulated by the special EU Directive 2010/30/EU. Labels inform the user about the quality of the product, taking into account its energy efficiency. The label ensures that everyone before the purchase decision can find out which unit will be the cheapest to operate. The energy efficiency rating, also referred to as the energy class, is indicated by the letters: for air conditioners, a scale from G (lowest) to A+++ (highest) has been determined.

We also use energy efficiency coefficients to assess energy savings: SEER for cooling and SCOP for heating. These factors determine the ratio of the cooling/heating power achieved by the air conditioner to the electrical power drawn by the unit from the mains during an entire season. Units with SEER=6 and SCOP=4 (class A++) from 1 kW of electricity on average per season can generate 6 kW of cooling energy or 4 kW of heat energy and can be up to 4 times cheaper in operation than fans and electric heaters.

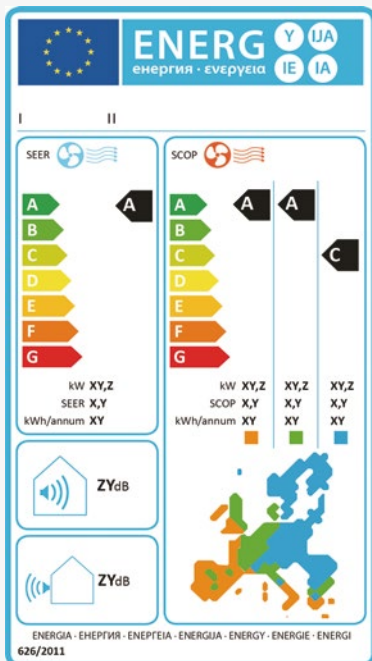

10-grade energy efficiency scale (from A+++ to G)

Power efficiency for cooling and heating

Efficiency determination based on calculations of multiple features, corresponding to the actual power consumption of the machine during operation

Sound power level

Data for 3 seasons (moderate – required, hot and cold – optional)

CURRENT ENERGY LABEL

Valid from 1 January 2013. Air conditioners up to 12 kW

	SEER (cooling)	SCOP (heating)
A+++	SEER ≥ 8.50	SCOP ≥ 5.10
A++	6.10 ≤ SEER < 8.50	4.60 ≤ SCOP < 5.10
A+	5.60 ≤ SEER < 6.10	4.00 ≤ SCOP < 4.60
A	5.10 ≤ SEER < 5.60	3.40 ≤ SCOP < 4.00
B	4.60 ≤ SEER < 5.10	3.10 ≤ SCOP < 3.40
C	4.10 ≤ SEER < 4.60	2.80 ≤ SCOP < 3.10
D	3.60 ≤ SEER < 4.10	2.50 ≤ SCOP < 2.80
E	3.10 ≤ SEER < 3.60	2.20 ≤ SCOP < 2.50
F	2.60 ≤ SEER < 3.10	1.90 ≤ SCOP < 2.20
G	SEER < 2.60	SCOP < 1.90

Featured functions

Operation at **low outdoor temperatures**

Thanks to the specially designed control board, the air conditioner can operate as a cooling function even at outdoor temperatures down to -15°C .

Temperature sensor

The temperature sensor is built into the remote control. Thanks to this, the temperature measurement is performed close to the resident, while the operation of the air conditioner is adjusted to the actual room conditions.

Built-in condensate pump

Thanks to the integrated pump, condensate can be removed up to a height of 750 mm.

360° air supply

Cassette air conditioners are equipped with additional supply air slots in the panel. This design ensures 360° fan operation which provide even better air distribution in an air-conditioned room.

Automatic **restart**

In case of the units equipped with the automatic restart function, the air conditioner remembers the last settings when the power supply is interrupted and automatically restores them when power is resumed.

Indication of refrigerant leakage

The air conditioner has a refrigerant leakage indication function. If the unit detects a leak, the indoor unit display shows EC message and the air conditioner is automatically switched off. This function also protects the compressor against damage.

Memory of louvers settings

Thanks to the louvers settings saving function, after each shutdown the air conditioner retains the last settings and restores them after restarting.

3D **air flow**

Horizontal and vertical louvers are controlled automatically and ensure uniform temperature distribution in a room as well as optimum air circulation.

WITHOUT EMERGENCY START FUNCTION

WITH EMERGENCY START FUNCTION

Emergency

USE

The emergency function of the air conditioner allows the unit to operate even if one of the sensors has failed. Thanks to this solution, operation of the air conditioner is not interrupted and it can operate until the fault is rectified.

Fresh air

The outdoor air can be supplied via a connecting duct to the air conditioner, thus improving the thermal comfort in the room.

Central controller

Possibility of connecting a central controller, controlling up to 64 indoor units.

HINTS **UNIT FEATURES**

Standby **mode**

In standby mode, the power supply is disconnected from unused electronic components, reducing power consumption to 1W. Compared to standard devices that consume 5W on average in standby mode, it saves about 80% of energy.

Constant heating **8°C**

The function of maintaining a constant temperature of 8°C in heating mode is a solution especially useful in bungalows/camping pods and detached houses.

It keeps the air conditioner at a constant temperature of up to 8°C; it prevents rooms from cooling down and pipes from freezing. This prevents the build-up of moisture and thus the development of microorganisms and fungi. Air

conditioners with this option are more efficient solution than commonly used electric heaters with thermostats.

This is what distinguishes Kaisai home air conditioners in their class. Combined with the Smart AC function and the ability to set the temperature at a distance, this makes our products ideal for users who are often away from home.

Twin **system**

The TWIN system allows you to connect two indoor units of the same power level to a single outdoor unit.

The system consists of an outdoor unit with a cooling capacity of 10.6 or 14.0 kW, a T-piece separating the refrigerant flow and two indoor units with a capacity of 5.3 kW or 7.0 kW. They work simultaneously, so they are ideal for air conditioning of large rooms such as conference and banquet rooms, open space offices, restau-

rants and other service and commercial facilities. Equal operation of two air conditioners makes it easier to maintain uniform temperature throughout the room. This solution, like the Multi Split system, also saves space, by using a single outdoor unit.

The Twin system can be used with Kaisai air conditioners: floor and ceiling air conditioners, Slim duct air conditioners, Super Slim cassette air conditioners.

Sleep function

Activating the sleep function causes the unit to increase the set temperature by 1°C per hour in cooling mode (to decrease – in heating mode) within two hours. During this time the fan is running at low speed. The air conditioner switches off after 5 hours. Slow, unnoticeable temperature change and automatic shutdown guarantee comfort and energy saving.

Breathe clean air

For the sake of **air quality**

Modern filters used in Kaisai products guarantee clean and fresh air in an air-conditioned room. The filters capture very small dust particles, bacteria, fungi and germs, leaving a healthy and clean air.

Self-cleaning of heat exchanger

In order to ensure the highest hygienic standards and comfort of use, Kaisai brand appliances use the latest self-cleaning technology of the internal heat exchanger.

After operation, the air conditioner switches to the cleaning mode. During the process, it removes moisture accumulated in the unit, which prevents the growth of microorganisms and fungi.

Kaisai air conditioners are designed for the sake of health and comfort of users.

Filter with **silver ions**

The silver ion filter is designed to destroy bacteria and prevent the development of microorganisms such as viruses and fungi. The internal structure of silver ions destroys microorganisms.

Filter with **C vitamin**

The filter emits vitamin C, which has a positive effect on the skin, protecting it from the sun's rays. As an active antioxidant, vitamin C has a nourishing effect, stimulates collagen production and reduces stress.

Catalytic **filter**

By using a multilayer catalyst layer and a fiber layer, the filter removes harmful particles and unpleasant odors from the air. It also eliminates volatile formaldehyde particles and harmful organic compounds.

High-density filter

Application of high density filters significantly increases the efficiency of dirt trapping – by up to 50%.

3M filter

Thanks to its unique design, the filter captures dust particles and other harmful substances from the air, which can cause respiratory diseases.

Modern technologies

Kaisai units are characterized by high quality of workmanship and application of modern technologies – all for the convenience of the user. Efficient and comfortable air conditioning is now available for everyone.

inverter

Inverter technology

Inverter technology in Kaisai air-conditioning units reduces power consumption, which in turn lowers down the cost of cooling rooms. Its application means quiet operation of the device and faster achievement of the desired air temperature.

Due to application of robust and pressure-resistant materials, the compressor in Kaisai air conditioners is extremely reliable element. In addition, it has a high-performance motor with a wide voltage range, so it can operate under extreme conditions in 24-hour mode and reach temperatures up to 60°C (230V/50Hz).

 HIGH-PERFORMANCE MOTOR	 WIDE VOLTAGE RANGE	 DURABLE COMPRESSOR MATERIAL	 HIGH-PRESSURE RESISTANCE
--	--	---	--

<>
total
65m

∧
vertical
30m

Total installation length

Kaisai's Split range units enable installation of indoor and outdoor units at a large distance from each other – up to 65 m in total and up to 30 m vertically. This makes it much easier to plan even in older buildings. You don't have to adjust the design of your house to the air-conditioning system – we adapt it to your needs.

Operating temperature:

Thanks to modern technology and the new R32 refrigerant, Kaisai air conditioners can operate in a wide range of outdoor temperatures: -15°C to 50°C in cooling mode and -25°C to 30°C in heating mode.

They can do their job all year round, providing users with cooling comfort in summer and additional heating in winter.

cooling [°C]

-15 ÷ 50

heating [°C]

-25 ÷ 30

Dimensions and **design**

We make every effort to ensure that Kaisai appliances follow the latest trends in design: we want the air conditioner to be neatly shaped and in line with the trend of modern interior design.

In addition, when designing indoor cassette and duct units, we take into account the space occupied by the equipment. Thanks to the optimal size of the devices, the suspended ceiling does not require much technical space and thus leaves more room for use.

wall air conditioners

Wi-Fi

Kaisai products comprise number of features improving the usage comfort, for example, new control options, so that managing the air conditioning has never been so convenient and easy.

Smart AC

Smart AC is a Wi-Fi module that comes as standard with all Kaisai wall-mounted air conditioners. Thanks to its application, the user can control the device through an application installed on a tablet or smartphone, also while away from home or office.

Using the Wi-Fi function, the user can turn the device on or off, change the temperature and some operating functions from anywhere in the world, where there is Internet access. Control via Wi-Fi allows you to save electricity and improve the comfort of operating air conditioning system by controlling the temperature in the apartment or office from any location.

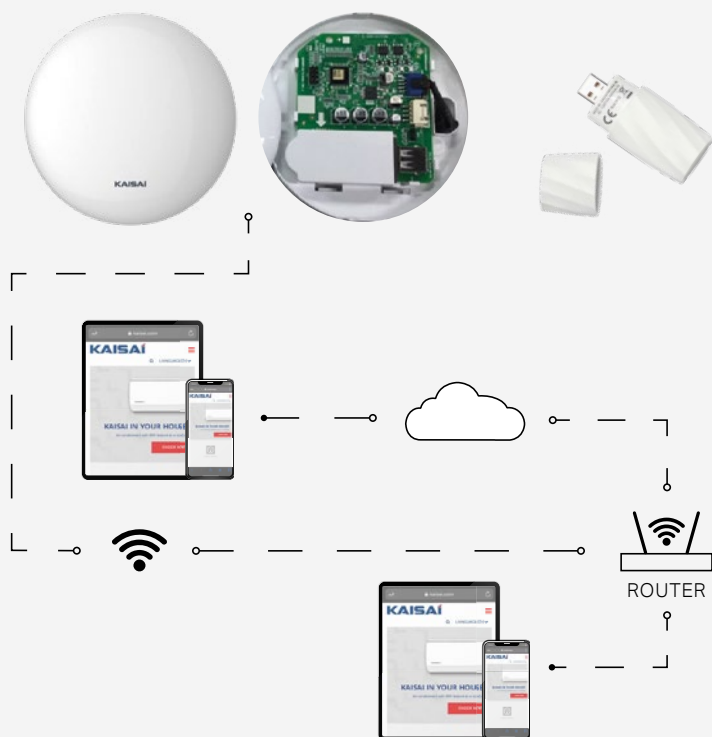

commercial air conditioners

The Wi-Fi control can now be used not only for wall-mounted air conditioners but also for other KAISAI air conditioner models: cassette, duct and floor/ceiling air conditioners.

Smart port

Smart port is a Wi-Fi module for KAISAI commercial air conditioners.

Wi-Fi

changing the operating mode, temperature and fan speed

mobile application for Android and IOS

preview of basic information about the operation of the air conditioner

Description of functionalities

Health

Evaporator self-cleaning

After operation, the air conditioner switches into the cleaning mode and removes any moisture accumulated in the indoor unit. This prevents the development of microorganisms and fungi.

Filter with C vitamin

The filter emits vitamin C into the room. This way the vitamin C is absorbed by the skin. This vitamin improves skin firmness, protects against harmful UV rays and reduces stress.

Filter with silver ions

This filter contributes to the elimination of bacteria and other harmful microorganisms thanks to application of active silver ions. It ensures a high standard of air hygiene.

Catalytic filter

Catalytic filter, due to application of multilayer catalyst coating, removes unpleasant odors from the air and effectively eliminates harmful organic compounds and volatile formaldehyde particles.

3M filter

Thanks to its unique design, this filter more effectively captures dust and harmful allergic substances that cause respiratory diseases.

High-density filter

Application of an increased density filter improves the efficiency of trapping contaminants, including dust and particulate. It not only protects the unit, but also maintains the air quality.

Fresh air

Fresh outdoor air is supplied to the unit via a connecting hose. This significantly improves the "atmosphere" in a room.

Comfort

Turbo

Turbo mode

Thanks to this option, the air conditioner operates at increased speed and ensures fast cooling or heating of the room.

3D air flow

Horizontal and vertical louvers are controlled automatically and ensure uniform temperature distribution in a room as well as optimum air circulation.

Automatic restart

During a power outage, the air conditioner remembers the last settings and restores them once the power is resumed. It does not require reprogramming of the unit after each power outage.

360° air supply

The unit can provide the best possible air distribution throughout the room with additional supply air slots in the air conditioner panel.

Temperature compensation

The unit compensates for the difference between the reading of the temperature sensor on the indoor unit and the actual temperature on the room floor. The desired temperature is reached throughout the room, not just around the air conditioner.

Cold air supply control

In order to minimize the feeling of unpleasant cool airflow, the air conditioner automatically reduces the fan's RPM in heating mode and increases the fan's speed as the air heats up.

Wide temperature range

Operation in wide range of outdoor temperatures. -15 to 50°C in cooling mode and -25 to 30°C in heating mode.

Cost efficiency

8°C continuous heating function

When the user is absent, the air conditioner maintains a constant room temperature of up to 8°C in heating mode, preventing the room from cooling down.

Standby mode

In standby mode, disconnection from unused components reduces power consumption even up to 80%.

Sleep function

Within two hours, the unit increases (in heating mode – decreases) the set temperature by 1°C per hour, and the fan is running at low speed. This reduces electric energy consumption and provides the best comfort for the user.

5 fan speeds of the outdoor unit

Thanks to the inverter technology, the outdoor unit has 5 modes of operation, which improves the energy efficiency and the comfort of operation of the unit.

12 fan speeds of indoor unit

The 12-stage fan control of the indoor unit ensures maximum comfort in the room and improves the energy efficiency.

Temperature sensor in the remote control

The temperature sensor built into the remote control allows measurement of the temperature closer to the user, so that the unit can better adapt to the surrounding area.

Eco

AC will run into a 8-hour saving mode which cuts 60% energy off against normal mode.

Safety

Evaporation of condensate

The condensed water is transferred to the condenser where it evaporates. As a result, the condensate tank is not required.

Operation at low outdoor temperatures

The air conditioner operates in the cooling mode even at outdoor temperatures as low as -15°C.

Operation at very low outdoor temperatures

The air conditioner operates even at outdoor temperatures as low as -25°C.

Indication of refrigerant leakage

The error code will be displayed on the control panel of the indoor unit, when the outdoor unit detects the refrigerant leak.

Emergency use

If one of the sensors fails, operation of the unit is not interrupted and can be continued until the failure has been corrected.

Self-diagnosis

The air conditioner monitors its operation and switches off when a malfunction or failure is detected. The error code is displayed on the control panel of the indoor unit.

Alarm port

The air conditioner is equipped with the alarm port enabling output of the fault signal.

Timer

The timer enables setting the time of automatic switching on and off the air conditioner.

Automatic louver (swing)

Automatic operation of horizontal louvers significantly improves the air distribution in the room.

Mono and multi

The indoor unit is universal and can be used in single-unit (mono-split) and multiple-unit (multi-split) systems.

Simple installation

The air conditioner enables easy installation and does not require any additional operation efforts.

Twin combination

Two identical indoor units operate simultaneously, connected to one outdoor unit.

Two-sided installation

It is possible to connect refrigerant supply pipes and condensate drain from both sides of the indoor unit, which facilitates installation and adaptation to the layout of the room.

Customized remote control

It is possible to change the factory settings of the remote control to suit the current needs of the user.

Central controller

Possibility of connecting a central controller, controlling up to 64 indoor units.

Memory of louvers settings

After each shutdown, the air conditioner remembers last settings of the louvers and restores them after the restart.

Port ON/OFF

The air conditioner is equipped with the port enabling remote switching on/off from a long distance (using non-voltage signal).

Multi directional casters

Thanks to the integrated casters, changing location of the air conditioner is easier.

Wi-Fi Control

The Wi-Fi module enables remote control of the air conditioner with a smartphone or tablet – from anywhere in the world.

Built-in condensate pump

Thanks to the integrated pump, condensate can be discharged up to a height of 750 mm.

Compact dimensions

Thanks to well planned components, the air conditioner features small dimensions while maintaining full performance parameters.

Large installation length

Thanks to the applied technological solutions, the indoor and outdoor units of the air conditioner can be separated from each other up to 50 m in total and 25 meters vertically.

Very large installation length

Thanks to the applied technological solutions, the indoor and outdoor units of the air conditioner can be separated from each other up to 65 m in total and 30 meters vertically.

Product range

38

Split air conditioners

Compact dimensions provide a subtle, elegant look, and a number of unit types allow them to be adapted to different types of interiors – both at home, in offices and in retail outlets.

52

Multi Split systems

These systems are recommended for buildings requiring air conditioning in many rooms. All the advantages of split-type devices with a single outdoor unit are retained.

Commercial air conditioners

58

Commercial facilities, such as offices, hotels, and restaurants, require equipment which provides a particularly effective air-conditioning system. Depending on the area and purpose of the facility, as well as the installation possibilities, we can apply floor, floor/ceiling, cassette, duct, or condensing units.

84

Portable air conditioners

Portable air conditioners are used where it is not possible to install split air conditioners. Thanks to their modern design, they are suitable for home and office interiors.

90

Air curtains

Air curtains are an important addition to air conditioning in commercial premises. By creating an outdoor air barrier, they reduce the energy consumption of the air conditioning system and increase the comfort of the air in passageways.

98

Heat pumps

Air-to-water heat pumps use the energy stored in the air to heat the building and to achieve high temperatures for domestic hot water. They are an economic and ecological solution for everyone.

108

Controllers

Kaisai's wide range of controllers allows you to conveniently adjust the air conditioners to your needs. Wired controllers, wireless remote controls and the Smart AC – Wi-Fi function allow you to comfortably use and adjust the operation of air conditioners for the most demanding users.

wall-mounted air conditioners

The compact dimensions of the wall-mounted units provide an elegant appearance and comfort of use, combined with high efficiency and simple installation.

The models come in many sizes, which makes it possible to adapt them to different types of interior, for both home and office use, as well as for commercial applications. The wall-mounted appliances do not require much space, and provide perfect room temperature in a very short time.

All wall-mounted air conditioners by Kaisai use the environmentally friendly R32 refrigerant, and standard accessories include the Wi-Fi function to control the unit using mobile devices. Depending on the model, there is a number of practical functions available for intuitive control and the optimum adaptation of the device to the needs of the user.

KWX 09 | 12 | 18 | 24 HRBI

The Kaisai Fly energy-saving wall-mounted air conditioner with R32 refrigerant combines elegance with functionality. Its universal, timeless design makes it suitable for any interior.

The device enables effective operation in the heating mode at outdoor temperature even down to -25°C. Wi-Fi function as standard increases the convenience of air conditioning control, and a modern wireless remote control allows you to use 3 additional functions: evaporator self-cleaning (Self Clean), continuous heating 8°C (Heating 8°C) and temperature sensor in the remote control (Follow Me).

wall-mounted air conditioners

KRX 09 | 12 | 18 | 24 AEXI

The Kaisai One wall mounted air conditioner is an energy-efficient appliance combining modern design with exceptionally simple installation, maintenance, and cleaning.

The new design of the air conditioner, with its properly shaped casing, and the optimised arrangement of the individual components inside the unit, help save time during installation and daily operation.

By using modern technology and the R32 refrigerant, the air conditioner can operate in a wide range of outdoor temperatures: from -15°C to +50°C in the cooling mode, and from -25 to +30°C in the heating mode.

Comfort of use is provided by a modern wireless remote control and a Wi-Fi function as standard, to control the device using your mobile phone or tablet.

wall-mounted air conditioners

KSN-12PRBI

The modern Kaisai Pro+ wall mounted air conditioner is a top-class energy-efficient appliance, distinguished by the exceptionally high SEER 8.1 and SCOP 4.6 energy-efficiency ratios.

The appliance is an ideal solution in cold climate zones, allowing for effective heating of rooms in a very wide range of outdoor temperatures. Thanks to the standard equipment, consisting of the compressor crankcase heater and the heater installed in the lower part of the outdoor unit casing, the air conditioner has the possibility to operate in the heating mode at outdoor temperature of up to -30°C.

The heat exchanger installed in the air conditioner is equipped with gold fins, which improve the efficiency of heat exchange, and also increase its anti-corrosion properties and prevent the growth of bacteria.

Pro+ combines modern design with a high level of user experience, thanks to the following functions: Wi-Fi as standard, Eco, and 3D air supply.

multi split systems

Air conditioners working in the Multi Split system are extremely energy-efficient and highly efficient devices. The system design allows for installation of 2 to 5 Fly wall units or Compact cassette units to one cooling unit (outdoor unit).

Each of the indoor units operates individually, has the ability to independently adjust the temperature and adjust the power to the needs of users. When buying a Multi Split air conditioner, we must select the cooling capacity needed for each room where there is a wall or cassette air conditioner. Selected devices are installed in rooms, and at the very end we connect each of the air conditioners to the previously installed one, large cooling unit. In this way, we do not need to install an indoor or outdoor unit in every room.

commercial air conditioners

The air-conditioning systems for commercial applications combine efficiency with a wide range of solutions dedicated to offices, conference rooms, hotels, or other rooms requiring efficient air conditioning.

Depending on the area and purpose of the facility, as well as the installation possibilities, we can apply floor, floor/ceiling, cassette, duct, or condensing units.

kfs

floor standing air conditioners

KFS-50HRFI

Floor standing conditioners are used in large areas, such as shops, showrooms, restaurants, and airport halls.

The KFS air conditioner is distinguished by its elegant and intuitive control panel, and functional wireless remote control combined with a temperature sensor, and its energy-saving technology, allowing the device to operate in the economy mode. Comfort of use is provided by the various practical functions of the air conditioner, such as 3D airflow for uniform temperature distribution in the room, and a temperature sensor built into the remote control, thanks to which the temperature measurement is made at the location of the user, and the operation of the air conditioner is adjusted to the actual conditions in the room. The appliance can be used in rooms with a total area of up to approx. 120-140 m².

floor/ceiling air conditioner

KUE 18 | 24 | 36 | 48 | 55 HRB32

Universal air conditioners that are ideal for rooms without suspended ceilings.

They are characterized by a three-dimensional supply of air through the automatic control of the louvers, which ensures optimal air circulation and uniform temperature distribution. The timer gives the possibility to set the time of automatic switching on and off the air conditioner. To minimize the feeling of an unpleasant, cool airflow, the air conditioner starts in heating mode and automatically reduces the fan speed until the heat exchanger is heated.

KUE 18 | 24 | 36 | 48 | 55 HRB32

it will work effectively in office, as well as in house

compact cassette air conditioners

KCA3U 12 | 18 HRB32X

Cassette air conditioners are perfect for offices, conference rooms or other large rooms that require efficient air conditioning.

Compact cassette air conditioners are equipped with an indoor unit with a quiet fan and a peripheral air supply. They are characterized by high efficiency and high comfort of use.

They have a function of supplying fresh air and the possibility of connecting an additional air supply duct to the adjacent room.

slim duct air conditioners

KTI 18 | 24 | 36 | 48 | 55 HWB32

Duct air conditioners are suitable for use in large objects. Their advantage is the ability to distribute air freely through ducts and diffusers in the entire room.

The Slim series of duct air conditioners is characterized by a significant available static pressure – 160 Pa with low noise level. The unit has a lower height than a standard duct unit, so that it can be installed in a small space in the suspended ceiling.

Thanks to the use of modern technology, the air conditioner automatically adjusts the static pressure and maintains a constant flow of air.

KOD30U 36 HFN32 • KOD30U 36 HFJ32
KOE30U 48 | 55 HFN32

Inverter condensing units are equipped with a control module that enables the connection of a universal outdoor unit to a freon heat exchanger in the air handling unit.

Such solution makes it possible to control the efficiency of the condensing unit by means of a 0-10V DC signal sent from the air handling unit control system. Both cooling and heating operation are possible. The units have built-in expansion valves, so that no additional refrigeration fittings are needed.

Kaisai condensing units may only be used with AHUs equipped with protection devices suitable for R32 flammability characteristic.

portable air conditioners

Portable air conditioners are perfect for all applications where there is a need to change location or where stationary air-conditioning is not possible.

The 2.6 kW KPC air conditioner has cooling, drying and evaporation functions. It is a perfect solution for rooms with low heat loads, with an area of up to approx. 20 m². The KPPD model with a cooling capacity of 3.5 kW has an additional heating function and can also be used in larger rooms up to approx. 30 m².

portable air conditioners

Portable air conditioners are perfect for all applications where there is a need to change location or where stationary air-conditioning is not possible.

The 2.6 kW KPC air conditioner has cooling, drying and evaporation functions. It is a perfect solution for rooms with low heat loads, with an area of up to approx. 20 m². The KPPD model with a cooling capacity of 3.5 kW has an additional heating function and can also be used in larger rooms up to approx. 30 m².

Efficient heating: Thanks to its heating function, the KPPD air conditioner is an excellent alternative to traditional electric heating systems, as it provides efficient heating with much lower energy consumption. Thanks to the fan forced air circulation in the room, the desired temperature is reached much faster.

Comfortable sleep: After starting the sleep function, the device will increase (in heating mode) the set temperature by 1°C per hour within 2 hours and the fan will operate at low speed.

Fireproof casing: For the safety of the user, the sealed metal housing of the electrical unit is used to prevent fire in the event of an electrical short circuit.

kpph

The KPPH air conditioner has 3 basic operating modes: cooling, dehumidification and ventilation. Warm air is extracted to the outside through a flexible ventilation pipe.

kpc

The KPC air conditioner has 3 basic operating modes: cooling, dehumidification and ventilation. Thanks to the condensate evaporation function it is not necessary to use a large condensate tank.

air curtains

Small but functional devices, which allow you to save energy by maintaining a constant temperature and avoiding unpleasant draughts inside the building. Easy to install and use, they provide effective protection against cold air and dirt from outside.

Kaisai air curtains are a guarantee of economy and comfort. Easy remote control, adjustable airflow and an attractive, modern design make the devices a perfect fit in the interior design. The air curtains will discreetly and effectively improve the comfort of customers at the point of sale, while taking care to save energy and eliminate heat loss in the room.

Modern and elegant Kaisai air curtains are perfect for public buildings. Offices, restaurants, cafés, shops and storage areas are places where doors are repeatedly opened and closed during the day, causing heat loss or overheating. In turn, for cafés and restaurants protection against dust and insects will provide even greater comfort of work and use of the premises.

eco home heat pumps

A heat pump uses free air energy and uses it to heat or cool a building or to produce domestic hot water. It is a cheap, ecological and reliable source of heat, which can be used by everyone.

Thanks to modern technology, the Kaisai heat pumps operate in a very wide range of outdoor temperatures and achieve high temperatures in the heating system or in domestic hot water applications. The absence of harmful emissions, safety and maintenance-free operation make Kaisai heat pumps the ideal solution for anyone who builds a house but also replaces or upgrades an existing heat source. Kaisai heat pumps are used in commercial, single- and multi-family buildings.

split (R32)

Ideal alternative
to gas, coal
or pellet boilers

A compact design, an independent internal unit, and flexible installation make the Eco Home - Split Heat Pump (KHA+KMK) the ideal choice for owners of homes, shops, offices, and service premises. All the hydraulic components are easily accessible. The refrigerating connection between the outdoor and indoor units is resistant to freezing, even during a prolonged power failure, and an additional charge of refrigerant is only required, if the length of the refrigerant lines exceeds 15m.

monoblok

(R32)

perfect solution
for houses, shops, offices
and service premises

The refrigerant system is fully integrated in the outdoor unit, which means that no additional refrigerant pipes are required. The two-door design provides easy access to the internal components. The user interface provides a simple and fast modification of parameters and their monitoring in real time. The length of the communication cable of up to 50m allows for great freedom of installation.

TYPES OF CONDENSING UNITS AND CONTROL

KEH-08VER/O • KEH-10VER/O

KEH-12VER/O • KEH-14VER/O

Controller

User interface (KHA+KMK, KHC)

- Multilingual menu, including Polish
- Newly designed controller with touch buttons
- Wireless WiFi operation
- Modbus RTU protocol - connect up to 16 devices, integration with BMS
- Simple and quick changing of the heat pump's operational parameters
- Checking the operating parameters in real-time
- Built-in temperature sensor
- The adjustable length of the communication cable can reach up to 50 m

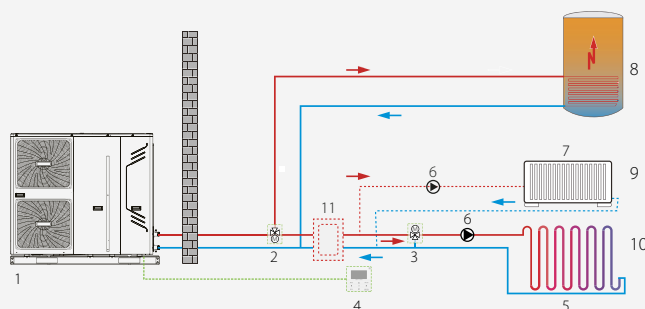

WiFi as a standard

- Free application to control the pump via WiFi
- Modification of the heating temperature and usable warm water settings
- Monitoring operational parameters
- Device failure information

Two heating circuits (standard)

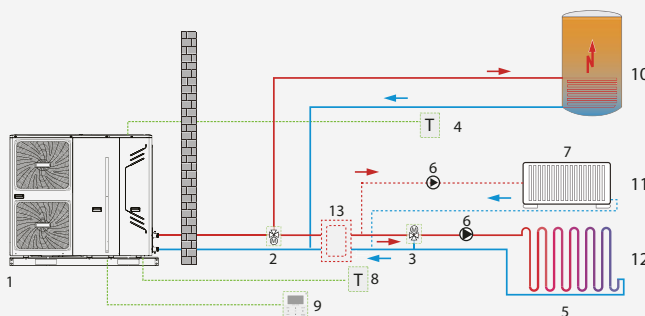

- More flexible because it has two control zones
- Separate temperature control for the underfloor and the radiator heating
- No need to purchase an extension module for a second heating system

Two control zones due to one interface

1. KHC / KHA+KMK
2. Three-way valve
3. Three-way valve
4. User interface
5. Underfloor heating
6. Water pump
7. Radiator
8. Domestic hot water tank
9. Zone 1 controlled base on the leaving water temperature
10. Zone 2 controlled base on the leaving water temperature
11. Buffer

Two control zones due to the user interface and the thermostat

1. KHC / KHA+KMK
2. Three-way valve
3. Three-way valve
4. Thermostat 1
5. Underfloor heating
6. Water pump
7. Radiator
8. Thermostat 2
9. User interface
10. Domestic hot water tank
11. Zone 1 controlled base on the thermostat 1
12. Zone 2 controlled base on the thermostat 2
13. Buffer

Accessories for **heat pumps**

ELECTRIC
HEATER

HP EH

The electric heater is a compact heat source, which supports or substitutes the KAISAI heat pump. Dedicated to the KHC-xxRX1 models. The KEH, KHA+KMK, and KHC-xxRX3 models have a built-in heater, as a standard.

ADDITIONAL TEMPERATURE
SENSOR

HP T1

A dedicated T1/T1B temperature sensor for the KHA+KMK and KHC pumps, when using an additional heat source or an external mixing unit. KAISAI accessories, such as the "Electric Heater" and the "Mixing Unit" have built-in sensors, as a standard.

3-WAY VALVE FOR SWITCHING
BETWEEN CENTRAL HEATING /
DOMESTIC HOT WATER

HP 3WV

A valve switching between central heating and domestic hot water, with a high KV's coefficient, including an actuator compatible with the KAISAI heat pump. Dedicated to all models of the KAISAI heat pumps.

MIXING GROUP

HP MXS

A dedicated mixing group for the KAISAI KHA+KMK and KHC heat pumps, required for two heating circuits with different supply temperatures (e.g. radiators and an under floor heating system).

CONTROLLERS FOR KAISAI UNITS

Wired controllers

WIRED
CONTROLLER
KJR-120X2

The controller is dedicated for duct air conditioners and optional for wall-mounted ONE, cassette, and floor / ceiling air conditioners.

Basic functions: Activation | Deactivation | Working mode | Air temperature | Fan speed | Timer | Weekly timer | Operation temperature range.

CENTRAL
CONTROLLER
CCM03

Optional controller for air conditioners: cassette, floor / ceiling and duct air conditioners.

Possibility to control up to 64 units. In addition to the standard functions, it has locking options for: operating mode, individual controllers and central control buttons. The maximum length of communication cables is 1200 m.

WIRED
CONTROLLER
KJR12B

The controller is dedicated for duct air conditioners and optional for cassette and floor / ceiling air conditioners.

Basic functions: Turning ON/OFF | Operating mode | Air temperature | Fan speed | Timer | Temp. sensor in remote control unit
Auto louver function

WIRED
CONTROLLER
KJR90A

Optional controller for: cassette, wall, floor / ceiling, duct devices.

Basic functions: Turning ON/OFF | Operating mode | Air temperature | Fan speed | Timer | Auto louver function | Clock

Wireless controllers

RG66A1, RG66A2, RG66B7 WIRELESS CONTROL UNIT

This controller is dedicated to wall-mounted, floor, cassette, and floor/ceiling air conditioners.

Basic functions: Activation / Deactivation | Working mode | Air temperature | Fan speed | Timer | Remote control temperature sensor | Automatic louvre function | Direction of air supply | Turbo function | Self-cleaning evaporator | 8st.C continuous heating function | Eco function*

*Each individual function of the remote control depends on the version. Refer to the remote control manual for details.

WIRELESS CONTROL UNIT
RG57

The controller is dedicated for wall, cassette, floor / ceiling air conditioners and optional for duct units.

Basic functions: Turning ON/OFF | Operating mode | Air temperature | Fan speed | Timer | Temp. sensor in remote control unit | Auto louvre function | Direction of air flow | Turbo function | Self-cleaning evaporator | 8°C continuous heating function

WIRELESS CONTROL UNIT
RG66A1(B2)

The controller is dedicated for floor air conditioners.

Basic functions:

Activation | Deactivation | Working mode | Air temperature | Fan speed | Timer | Remote control temperature sensor | Automatic louvre function | Direction of air supply | Turbo function.

WIRELESS CONTROL UNIT
R51

The controller dedicated for KPPD portable air conditioners and optional for wall, cassette, floor / ceiling air conditioners.

Basic functions: Turning ON/OFF | Operating mode | Air temperature | Fan speed | Timer | Direction of air flow | Auto louvre function | Turbo function

WIRELESS CONTROL UNIT
YX1F

Controller dedicated exclusively for KPC portable air conditioners.

Basic functions: Turning ON/OFF | Operating mode | Air temperature | Fan speed | Timer | Auto louvre function | Turbo function

The purpose of this document is to provide information and present heat pumps of the Kaisai brand. | Since the technologically advanced production process necessitates its continuous control and improvement, the information contained in this publication may be subject to change. The technical data and prices included in the  are subject to change. Up-to-date information is always available on www.kaisai.com

All technical data is compliant with the guidelines specified in the following standards: EN14511; EN14825; EN50564; EN12102; (EU) No. 811:2013; (EU) No. 813:2013; OJ 2014/C 207/02:2014. The SCOP seasonal heating efficiency was determined for temperate climate conditions. The sound power level in the heating mode was determined in accordance with EN 12102, under the conditions consistent with EN 14825.
