# Photovoltaic modules for your home and office

Kaisai units are high quality, environmental-friendly products, designed with the operation comfort in mind. Moreover, we offer them at reasonable prices.

The Kaisai brand debuted on the Polish market in 2011 and since then, year after year, it has been recording growing sales figures in Poland as well as on foreign markets. The latest technological solutions make Kaisai devices leaders in their class and meet high expectations in terms of ecology, safety, energy efficiency, quiet operation, comfort of use and manufacturer's warranty. Through many years of investment in technology, the Kaisai units have been recognized as some of the most innovative air-conditioning solutions, successfully implemented in public facilities and residential buildings.

32 countries

over 180,000 of installed units

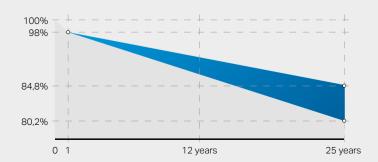

52 product types

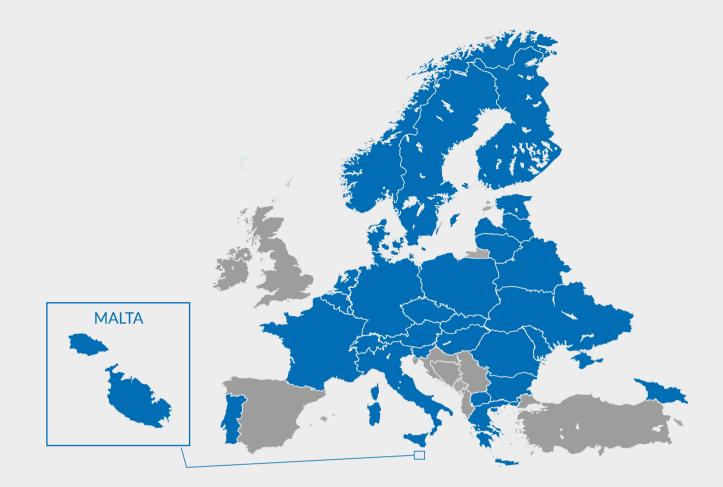

#### **25 YEARS OF PERFORMANCE** 12 years on the product

Guaranteed efficiency of 98% in the first year; from the second year to the twenty-fifth year 0.55% maximum decrease from the module nominal output per year. After 25 years, 84.8% cell efficiency from the warranty start date.

The graph shows the difference between the competitor's averaged proposal and Kaisai's guarantee.

# Within the business platform of Kaisai International Corporation, following the principle of Think globally - work locally, the Kaisai brand is present in the following countries:

Austria, Belarus, Belgium, Bulgaria, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Georgia, Iceland, Italy, Latvia, Lithuania, Luxembourg, North Macedonia, Malta, Moldova, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Ukraine.

The motto **"We Care about Air"** derives from passion and understanding of human needs and is a declaration of responsibility for people and the environment. Our focus is on the quality and comfort of air – in the office, at home and in all rooms where people are present. Our values: respect for the environment, partnership with the Client, responsibility for the Employee, taking care of the business environment.

# WHY BET ON

### **RENEWABLE ENERGY SOURCES?**

Renewable energy sources (RES) **are based on natural resources**, the acquisition of which provides not only emission-free energy production, but also a whole range of possibilities for its use. Due to relatively easy access to technology and the possibility of using it by both companies and individual households, **the most popular is the energy obtained from the air and the sun**.

Certified to withstand maximum static front (5400 Pascal) and back (3800 Pascal) test loads.

#### **EFFICIENCY** under weak sunlight conditions

Higher power output in low sunlight conditions such as overcast or foggy weather.

#### **RESISTANCE** to harsh conditions

High quality materials ensure optimum operating conditions for the modules, even in more demanding constructions such as large photovoltaic farms.

#### REDUCTION of power losses

Optimizes system output power up to 2% through "intensity sorting" technology, considering variations of this parameter on individual system modules.

#### HIGH output power

Compared to a standard module size 1587,5 mm, the output power increases by 30-40 W.

#### **RESISTANCE** to PID degradation

Advanced cell technology and materials of the best quality ensure high resistance to PID.

#### UNIQUE cell design

The special cell design allows lower electrode resistance and lower current, improving efficiency. This reduces losses due to partial shading and cell wear, while increasing solar energy conversion capacity.

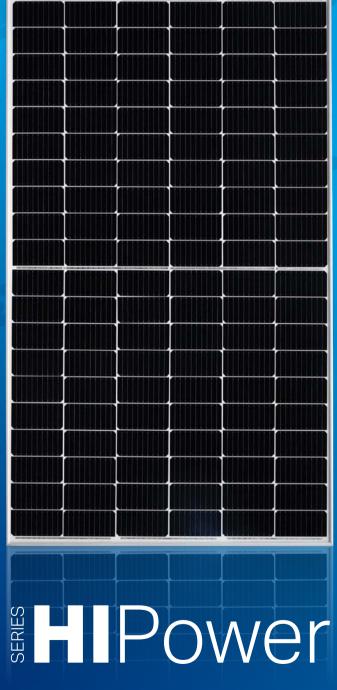

#### HIGHEST CLASS waterproof junction box

IP68 protection present in the module provides the highest resistance to weather conditions. Allows panels to be installed in all orientations and reduces stress on the cables. Low resistance high reliability connectors ensure maximum efficiency with highest energy production.
